## THE GUZZLER ULTRA 100KM TRAINING PLAN

Before starting this program you should be running around 5 to 6 hours per week which includes a long run of around ninety minutes to two hours on the trails.

Over the next 16 weeks, this program will build on your current running experience to prepare you to tackle The Guzzler Ultra, 100km.

## COACH'S NOTES:

WARM UP AND COOL DOWNS. Workouts always have a 10 minute warm up, drills \& strides, as well as a 10 minute cool down. Warm ups and cool downs should be run very easy. You should be able to hold a full conversation. If at the end of completing a warm up you feel any pain or have a niggle, then the workout should not be completed. Workouts to be completed on a flat road or grass, unless specified otherwise

DRILLS are movements like A/B/C skips, side shuttles, grapevines, leg swings, high knees, fast feet. Completing these regularly will help improve running technique, as well as ensure muscles are activated before starting a workout.
STRIDES are around 60 m to 100 m in length. They are sometimes called run throughs or accelerations. A stride is not a sprint, rather you increase speed as you go and focus on having good form and being in control. Walk or have a rest for as long as you need in between each stride. They can also be completed uphill.
TEMPO RUNS should be run at a pace you can hold for 40 mins to 1 hr . It is not flat out. You should be huffing and puffing, but not red lining. You should be able to speak in single words only, not sentences.

LONG RUN. The weekend long run is the most important run of the week and should be completed on trails that are similar to race day. The Guzzler is 105 km with 4000 m of elevation/climbing/hills, which works out to be around 400 m of elevation per 10 km . This can be a good goal for your long runs to ensure you are getting enough elevation.

Wear your vest full of the race mandatory gear. Your long run is a time to test out gear for race day and practice race day nutrition. Take notes of nutrition that works, gear that works and what doesn't. This will help you prepare for race day.

Your long run should be run at an easy pace and you should be able to hold a conversation. Think of it as time on feet but try not to stop your watch and spend too long standing around. Long runs are completed to time and not distance. Chasing distance does not take into account hills, conditions, and tests your ability to recover rather than giving you a specific training benefit. Over training is prevalent in trail and ultra so be conscious to not fall down this rabbit hole.

REST DAYS should have sleep and food prioritised as these are the best recovery tools. Resting is training and rest days are when your body can absorb and adapt to the training taking place. Don't skip rest.

THE GUZZLER ULTRA, 100KM

## THE GUZZLER ULTRA 100KM TRAINING PLAN

COACH'S NOTES, WK1 - 4:
Focus on getting into a good routine this four week block. Take runs a bit easier and don't force anything. You need to store up motivation for later in the training block so don't use it all now.
Week 4 is a deload week so the volume comes down to let your body recover.

## THE GUZZLER ULTRA 100KM TRAINING PLAN

COACH＇S NOTES，WK5－8：
The volume increases in this block and the Thursday mid－week long run should now be completed on hilly trails if you can．If you need to hike a climb，hike．You will be hiking on race day so get used to doing it in training．Week 8 is a deload week so the volume comes down to let your body recover．

## THE GUZZLER ULTRA 100KM TRAINING PLAN

COACH'S NOTES, WK9-12:
This four week block is the biggest volume and most race specific. Try to get onto the trails as much as possible for your runs and get onto the hills. There are hiking repeats because hiking fast is a skill that needs practice. Everyone will hike at some point come race day. If you can do your long runs on the course, and try doing some night runs to get used to running in the dark with a headlamp. Week 12 is a deload week so the volume comes down to let your body recover.

## THE GUZZLER ULTRA 100KM TRAINING PLAN

## COACH'S NOTES, WK13-16:

Week 13 is the highest volume so keep the effort easy. After this week it is time to start tapering for race day. Tapering means the volume decreases, but there is still some intensity, allowing your body and mind to recover for race day. A lot of people will do too much during taper and show up to race day still fatigued. Don't sabotage your race day. Let your body recover. Use your extra time from the decrease in training to prepare mental strategies, drop bags, organise crew plans and visualise your race day.
Post-race do not rush back into training. At a minimum, the next two weeks should be spent sleeping, eating, going for gentle walks and doing gentle movement, but most importantly celebrating your achievement.
